PRIVATE SECTOR HIRING

Kolkata's Sector V Adds Fresh Hiring as West Bengal Expands Its IT Employment Base

Published: 26 September 2026

Kolkata, September 26, 2026: Hiring in West Bengal's technology sector extends beyond software development and engineering. Esho Infotech's latest opening in Kolkata's Sector V brings data management and customer communication together in a single position.

The IT infrastructure company is hiring a Data Entry Operator cum Telecaller at an annual CTC of Rs. 1.8 lakh. Candidates must have completed Higher Secondary education or graduation and have at least one year of experience in a similar role.

The position involves updating and checking business records, maintaining digital files, making outbound calls and following up with prospective customers. It reflects the everyday work needed to support an IT business as it serves clients and develops new relationships.

Esho Infotech provides services across networking, cloud computing, cybersecurity, servers and data centre infrastructure.

The opening comes as West Bengal continues to develop its IT and IT-enabled services sector. In its 2026-27 budget speech, the state said its built-up space for the sector was creating employment opportunities for nearly 11,724 IT professionals. Esho Infotech's vacancy is one position within that wider employment landscape, illustrating how technology businesses also create opportunities for people with administrative and communication skills.
